# Washington State ASCS Annual Report

## FOREWORD

The 1972 Annual Report of the Washington State ASCS Office is hereby compiled presenting a summary of ASCS county operations.

ASCS committees are responsible for the administration of Federal farm programs which directly or indirectly effect the welfare of each farmer and citizen of the nation.

The Agricultural Act of 1970 was designed to help farmers make a shift to market-oriented agriculture with goals designed to give the farmers more decision making opportunities to protect and improve farmers' income, to put a greater reliance on the marketplace as a principle source of farm income, and to keep agricultural production in line with anticipated needs. Worldwide demands for proteins as well as a higher standard of living in foreign countries has resulted in an improvement of prices due to increased sales. This has been very beneficial to the nation's farmers.

The Rural Environmental Assistance Program (REAP) was terminated on December 22, 1972. This program was designed to help farmers and ranchers prevent or abate agricultural related pollution in water, land, and air, and by conserving agriculture, soil, water, woodland, and wildlife resources.

The Waterbank Program which was initiated in 1972 and was on a test basis was also terminated on December 22, 1972. This program was designed to help propagate waterfowl in those quality nesting areas and prevent further drainage of wetlands.

Our sincere appreciation is extended to ASCS county and community committeemen, county and State office personnel, and representatives of other agencies and farm organizations who greatly contributed to the success of our farm programs in 1972.

Washington State ASC Committee

## ADMINISTRATIVE OPERATIONS - 1972

Washington's 39 counties are divided in 133 local administrative districts (communities). Producers in each community elect a community committee of three who, in turn, elect a county committee of three producers to administer the various direct action programs in their county. To assist them in this function, 32 county offices are maintained, each supervised by a county executive director. In seven instances, one office functions for two county committees. These offices are staffed by 81 full-time employees in addition to the executive directors. They also utilize part-time help during the busy summer season, primarily to measure land for compliance purposes.

Disbursements during 1972 by these offices, to some 35,567 program participants on commodity, conservation and price support programs, amounted to \$132,997,533. In addition, administrative expense for that period amounts to \$1,608,760.

In our constant search for greater administrative efficiency, much of the routine work in these offices is being automated. This has enabled us to process a substantially greater workload with fewer employee man-days. Our constant goal is striving for better service to farmers at a lower cost.

#### WATERBANK PROGRAM

The Waterbank Program was approved by Congress in 1972. The purpose was to preserve, restore, and improve the wetlands of the Nation, and improve habitat for migratory waterfowl, and other wildlife resources. In addition, the program would reduce runoff, soil and wind erosion, contribute to flood control and improve water quality by reducing stream sedimentation and promote comprehensive and total water management planning.

Nine hundred and ninety-eight acres of wetlands and other migratory waterfowl habitat has been placed under contract through cooperative efforts of the Douglas County farmers and ASCS. The acreage, 219 acres of wetland and 779 of nesting and breeding habitat, was signed up under the first year of the Waterbank Program.

## REBUILDING A QUALITY ENVIRONMENT THROUGH THE RURAL ENVIRONMENTAL ASSISTANCE PROGRAM

Americans are becoming increasingly concerned about the quality of their environment. They are distressed to find the air they breathe carries with it dust, exhaust fumes, and chemicals. They are disturbed that many of their once clear streams and lakes are now so polluted that they are no longer safe for swimming, fishing, or as a source for drinking water.

While conservation is as important as ever, no longer is it enough to conserve what we have; we must also restore what we have lost. In recognition of the need to clean up agriculture's contribution to pollution problems and to help in the restoration of the environment, the new Rural Environmental Assistance Program (REAP), successor to the Agricultural Conservation Program (ACP), offers incentive cost-sharing assistance.

The major purpose of REAP is to improve the quality of life for all people. This will be accomplished by helping farmers and ranchers to prevent or abate agriculture related pollution of water, land, and air; and by conserving agricultural soil, water, woodland, and wildlife resources. REAP is the principal channel through which the Federal Government, in the national interest and for the public good, shares with farmers and ranchers the cost of carrying out approved conservation and pollution abatement practices on their land. REAP puts its priorities on enduring conservation practices which result in the control of erosion, the prevention of siltation, the prevention and abatement of livestock waste pollution, and keeping pesticide residues and other agricultural chemicals from polluting the environment. REAP emphasis also is on encouraging farmers to undertake projects they could not--or would not--carry out without cost-sharing assistance.

More people today worry about the silt that washes downstream than about the gully it came from. And we're concerned today with problems such as chemical residues, over-fertilized lakes, and the disposal of livestock wastes. Pressure will continue to build on farmers to eliminate farm-related pollution. The re-oriented REAP will help farmers deal with our changing environmental needs...to keep current with the times ...to better serve the needs of the country.

The state summary on the following pages contains data on participation, practice performance, and Federal cost-sharing during the 1971 program year.

## POLLUTION CONTROL MEASURE

Animal waste storage facilities to prevent or reduce the pollution of water, land, or air where there are soil and water conservation benefits

### I-1 ANIMAL WASTE STORAGE FACILITIES

# PRACTICE F-4 EMERGENCY CONSERVATION MEASURES

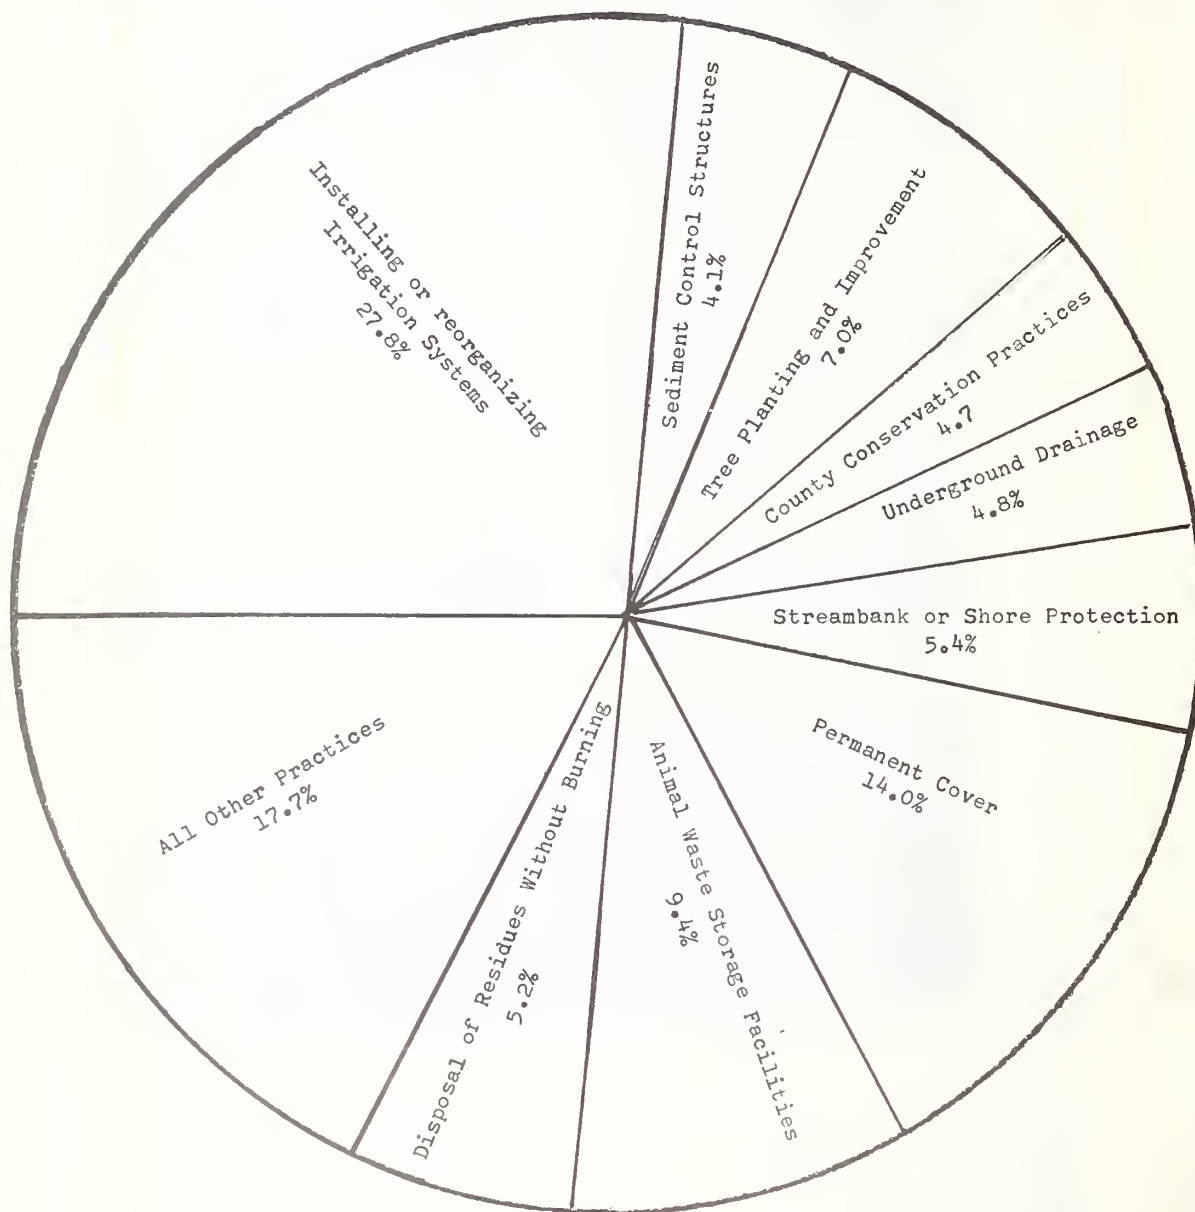

County	Farms	Acres Served	Cost-Shares Earned
Chelan	45	628	\$59,650
Douglas	41	522	16,482
Grays Harbor	49	1,968	191,910
Okanogan	86	4,903	145,504
Total	221	8,021	\$413,546

Public Law 85-58 provides cost-share payments to farmers who perform Emergency Conservation Measures to control erosion on farmlands, or to rehabilitate farmlands damaged by wind erosion, floods, hurricanes, or other natural disasters.

### 1972 WHEAT PROGRAM

The 1972 Wheat Program was the second year of operation under the "Agricultural Act of 1970" under which the rigid acreage allotments were eliminated as production controls, and more reliance was put on the market place as a principal source of farm income.

The "set-aside" approach was used again. A farmer could plant any crop (other than quota crops) he wanted to after he maintained his set-aside and conserving base acres. The minimum set-aside was 83% of the domestic allotment which was the limit set by the Law.

In January 1972 the Department included an additional set-aside provision, which allowed producers to designate an additional 75% of the domestic allotment as set-aside. Winter wheat producers who signed up for additional set-aside were required to dispose of planted wheat, and spring wheat producers could designate additional acreage to the extent that the additional set-aside and the 1972 wheat acreage did not exceed the 1971 plantings to wheat. The per-acre rate of 94 cents times the yield times the acreage of set-aside equaled the additional set-aside payment.

The number of acres of additional set-aside in the State was 40,603 and the payment was \$1,609,880.

The domestic allotment for the State was 707,856 acres and the check yield was 43.1 bushels. Proven yields were again used by many producers to increase their yields on the farm. The certificate rate was \$1.34, which was based on the July 1, 1972 parity of \$3.02 minus the 5-month National average market price of wheat (July through November) of \$1.68 equals \$1.34 a bushel payment. The domestic allotment times the yield times the certificate payment rate equaled the payment. Payments were limited to \$55,000.

Substitution between wheat and feed grain was used for history purposes and all the acres of wheat over the allotment could be credited to protect the feed grain base. Barley was a feed grain in 1972.

### 1972 FEED GRAIN PROGRAM

The 1972 Feed Grain Program was a part of the over-all farm program that was designed to give the farmers more opportunity for decision-making on their farms and put a greater reliance on the market place as the principal source of farm income.

As was true with wheat, the producer could maintain his set-aside and conserving base acres and plant the rest of the cropland to any other crop except quota crops.

Corn, grain sorghums, and barley were included as feed grains under the program. The minimum set-aside percentage was 25% of the feed grain base and he could sign up for an additional set aside up to 10% of the corn-grain sorghum base and up to 20% of the barley base, and as an optional set-aside another 5% or 10% of the corn-grain sorghum base. The Secretary of Agriculture had the option of accepting either 5% or 10% of the latter option and chose to accept the option at 10% after the signup.

Payments were based on the difference between the National average market price for the first five months of the marketing year beginning October 1 and \$1.35 or 70% of the corn parity price on October 1, whichever was higher. The rates for Option 1 were 80 cents per bushel for corn, 76 cents per bushel for grain sorghums, and 64 cents per bushel for barley. The rate times the yield times  $\frac{1}{2}$  of the corn, grain sorghum, or barley base equals the payment for the qualifying set-aside. On the additional and optional set-aside, the payment rates were 52 cents a bushel for corn, 49 cents a bushel for grain sorghum, and 42 cents a bushel for barley.

The payments in the State for the Feed Grain Program were \$5,835,048 on 146,585 acres of minimum set-aside and 45,616 acres of additional and optional set-aside.

Substitution was permitted and any feed grains planted in excess of the feed grain base could be used to protect the domestic wheat allotment.

## PRICE SUPPORT PROGRAM

Price support operations are conducted in the name of and financed by Commodity Credit Corporation. Any price support program must be approved by the Board of Directors of CCC and the Secretary of Agriculture.

Price support operations in the field involving direct dealings with farmers are a responsibility of State and County ASC Committees. County office personnel assist the farmer in the preparation of price support documents, check eligibility for price support, and adequacy of farm storage facilities.

Support is achieved through loans, purchases, and payments for some commodities at announced levels. For most commodities, loans are made directly to producers on the unprocessed commodity through ASCS county offices. Smaller amounts of many are purchased from producers.

Price-support loans to producers are "nonrecourse." If market prices rise above support prices, producers can pay off their loans and market their commodity. If market prices fail to rise above support prices, producers can deliver the commodity to CCC, with appropriate adjustments for quality and quantity, and discharge their obligation in full.

Support loans and purchases give farmers a ready means of promoting more orderly marketing, particularly in periods when bountiful harvest supplies threaten to push prices of farm commodities down to unfair levels. When supplies are excessive, stocks are built up in supporting farm commodity prices. These stocks are in turn released into the market as needed to stabilize supplies and prices.

Eligibility for price-support loans, purchases and payments, and for wheat marketing certificates is conditioned on participation in allotment or commodity acreage diversion programs for that particular crop.

Due to the longshoremen's strike in 1971 from July to December 1, grain could not be moved from country position to terminal markets. The cash market dropped below price support level as farmers were unable to market their wheat. This resulted in one of the largest price support programs since the inception of price support loans. When the strike was settled, cash market prices advanced above support, export markets developed, and most farmers were able to liquidate their loans above support prior to loan maturity.

The following tables indicate, by commodity, the number and type of loan, quantity and loan amount placed under loan, and the number and quantity of farm-stored and warehouse-stored resale and extended loans.

##

COUNTRY ELEVATOR -- STORAGE CAPACITY 305,000 BUSHEL  
FACILITY LOCATED AT STARBUCK, WASHINGTON

Such elevators are licensed under State or Federal Warehouse Laws and approved under the Uniform Grain Storage Agreement with CCC to store grains prior to marketing or pledged for price support loans.

Capacity of this elevator is  
200,000 bushels and is located  
in Columbia County.

## FARM STORAGE AND DRYING EQUIPMENT LOANS

A substantial part of the grain placed under price support loan each year is held in farm storage on the farms where it is produced. To encourage increased farm storage, CCC makes loans to farmers to finance new farm storage facilities for the storage of price-supported commodities. The program was inaugurated in June 1949.

Since 1955, loans for construction of 1,330 farm storage facilities, with a capacity of 13,964,076 bushels have been approved by county committees. Loans made under this program are administered by County ASC Committees.

Disbursements are made by CCC Sight Drafts, and all repayments are made to the County ASCS Office. A producer may borrow up to 85 percent of the cost of the new storage bins. Repayment of the loans are made in four equal installments, with the first installment payable 12 months after disbursement. Interest is computed on the unpaid balance as follows: Loans which were in effect prior to May 30, 1969 have an annual percentage rate of 4.08. Loans effective May 30, 1969 to April 1, 1970 -- 6 percent; loans effective April 1, 1970 to February 13, 1971 -- 7.5 percent; loans effective February 13, 1971 to March 30, 1972 -- 6 percent; loans effective March 30, 1972 to December 13, 1972 -- 5.52 percent; and, effective December 13, 1972 -- 6 percent.

All facility loans made in this State have been in Eastern Washington counties.

The following tables indicate the activity in the 1972 Farm Storage and Drying Equipment Loan Program.

##

This farm storage facility was built for storing corn and other grains. It is located in Grant County. A stationary drying unit is a part of the facility. Drying units are necessary to reduce the high moisture content of corn and other small grains for safekeeping the grain while in storage.

A Farm Storage Facility Loan was approved for the purchase and erection of this facility.

This farm storage facility was built by a producer in Spokane County.

Construction of this facility was possible with the help of a Farm Storage Facility Loan.

## WOOL INCENTIVE PROGRAM

The Wool Program, administered by the ASCS, is an incentive program to encourage an annual domestic production of approximately 300 Million pounds of shorn wool.

To encourage this production, payments on shorn wool are based on the percent needed to bring the average return received by all producers up to the support level.

The support on shorn wool for the 1971 Program was 72 cents per pound. This support will continue at the same level through 1973. The rate of payment for 1971 unshorn lambs was \$2.10 per hundredweight of unshorn lambs sold.

Deductions are made from shorn wool and lamb payments to provide funds for advertising, promotion, and related market development activities on wool and lambs. Deductions for this purpose are authorized by law and approved by wool producers voting in a referendum. The deductions are 1.5 cents per pound on shorn wool and 7.5 cents per 100 pounds on lambs marketed.

The following tables indicate the 1971 Wool Program for Shorn Wool and Unshorn Lambs.

## SUGAR BEET PROGRAM

The United States Sugar Program has a three-fold purpose:

- (1) To protect the welfare of the U. S. sugar industry.
- (2) To provide U. S. consumers with ample sugar supplies at reasonable prices.
- (3) To promote and strengthen the export trade of the United States.

To encourage the continued domestic production of sugar in this country, conditional payments are made to producers in return for their compliance with the production adjustment and other provisions of the program.

To be eligible for sugar payments, growers must plant within their proportionate shares, when restrictive shares are in effect, pay field workers in full for work performed at rates not less than those determined by Secretary of Agriculture to be fair and reasonable, and must not employ children under the age of 14 or permit children between 14 and 16 years of age to be employed for or permitted to work for more than 8 hours a day.

The payment rate is the basic 0.8 cents per pound of sugar commercially recoverable, raw value, \$16.00 per ton on the first 350 short tons. This rate is reduced on successive steps to a minimum of 0.3 cents per pound on production over 30,000 tons.

The program also gives benefits to growers in the form of special conditional payments for crop deficiency or abandonment caused by drought, flood, storm, freeze, disease, or insects.

Payments to producers are financed out of the general funds of the Treasury. However, sugar taxes (an excise tax of one-half cent per pound, raw value, on all sugar marketed within the quota system) provide funds for the Treasury which more than offset all costs of this program.

Proportionate shares, when in effect, and payments to growers are made by ASC County Committees.

The following tables present the data relative to participation, production, and payments in the 1972 Sugar Beet Program.

##

## INDEMNIFICATION FOR BEEKEEPERS

Section 804 of the Agricultural Act of 1970 authorizes the Secretary of Agriculture to make indemnity payments to beekeepers, who through no fault of their own suffered losses of honeybees after January 1, 1967, stemming from the use of economic poisons which had been registered and approved by the Federal Government.

The economic poison must have been applied near or adjacent to the property on which the beehives of such beekeeper were located. The amount of the indemnity claim is limited to the net loss sustained by the beekeeper. It is the responsibility of the beekeeper to establish that he took all reasonable precautions to protect his bees. The beekeeper also must establish conclusive evidence that he did not have an adequate warning prior to the application of the pesticides within the forage area.

It is the responsibility of the beekeeper to document the extent of his financial losses resulting from the deaths of his honeybees directly from the effects of the pesticide, excluding any allowance for natural deaths which occur each year.

Payments are also computed on a flat rate basis. Colonies Destroyed - \$20.00 per colony; Severely Damaged (field bees killed, damage to the brood) - \$15.00; Moderately Damaged (field bees killed, no damage to the brood) - \$5.00.

The honeybee is necessary to our national economy for the pollinization of all fruits, fresh vegetables, and seed crops.

The program expires December 31, 1973. Claims are filed with the County ASCS Office and approved for payment by County Committees.

## CROPLAND ADJUSTMENT PROGRAM

The Food and Agriculture Act of 1965 authorized a new long-term Cropland Adjustment Program. It is a voluntary program designed to help farmers producing crops in surplus supply to enter into long-term agreements.

Farmers participating remove cropland from production for periods of from five to ten years. The diverted cropland is put to conservation, recreational, and open space uses. The program also emphasizes assistance to farmers, who, because of age, off-farm employment, or other personal adjustment reasons, desire to reduce their farming operations.

Accepted agreements are paid at a rate determined by the crop diverted and in productivity of that crop on the farm. Cost-sharing for carrying out needed conservation uses is allowed at approximately 50 percent of the cost.

Under Greenspan provisions, the program offers local, State and other governmental agencies assistance in acquiring cropland and establishing practices to meet their open space needs.

Fifty contracts are still in effect. Annual adjustment payments for 1972 amounted to \$69,152.

Producers could enter into contracts during the sign-up period held in 1966 and 1967.

## COMPLIANCE

All programs have applicable procedures and regulations with which participating producers must comply. The term "compliance" refers to the actions taken in determining the manner in which producers comply with these procedures and regulations. Through compliance operations, facts and figures are developed for use by county committees in determining a producer's eligibility to share in program benefits. These compliance operations are performed by both county and State personnel.

A yearly work plan is developed, which includes specific training goals. The primary purpose is to improve all phases of compliance operations and service to program participants. In 1972, comprehensive training was furnished selected county office and all field employees by State compliance personnel prior to the beginning of program operations. In addition, individual training was provided by CED's and county compliance supervisors for all county office personnel working with the compliance program.

Measurement service was provided on an "actual cost" basis to producers requesting acreage or bin measurements. Participating producers requesting service were furnished "guaranteed measurements" providing they stay within the staked area and comply with other program requirements. The productivity of offered set-aside as related to the rest of the farm was also determined. Measurement services were performed on approximately 1600 farms during 1972.

Producers certify program or crop acreages by established dates, after which farms are picked at random by computer for spot checking. These farms are then visited and required acreages measured. Accuracy of producer certification is compared with measured acreage in determining program compliance. In 1972, approximately 2600 spot checks were performed by county office personnel and 495 spot checks were performed by State office personnel to determine various program compliance.
